

FINOPS PLATFORM

The FinOps solution built for action, not just analysis

Cut waste, speed up savings, and go from insight to action in minutes—not months—with the only FinOps platform built for action.

Trusted by modern FinOps teams

Purpose-built for the business of cloud

AI-DRIVEN INSIGHTS

Spot anomalies before they wreck your budget

Your cloud spend doesn't follow a script. Our AI continuously learns your environment, flags unusual spikes in real time, and can trigger automated responses before the cost hits your books. Forecast with confidence using machine learning models tuned to your unique patterns.

COST ALLOCATION

End the tagging struggle—accurate allocation, fast

No more chasing down bad tags or duct-taping data together. Our FOCUS-native platform automatically maps costs across public cloud, VMware, and Kubernetes—even unallocated capacity—so you get defensible, near-perfect allocation in weeks, not quarters.

CONTINUOUS OPTIMIZATION

Take cost savings off the backlog

Recommendations are easy. Action is hard. CloudBolt closes the loop with 24/7 policy-driven automation that rightsizes, reclaims, and removes waste without manual approval chains.

PERFORMANCE METRICS

Measure what moves the needle

Track KPIs that actually matter to the business. Our FinOps Performance Index™ scores your maturity, cost governance, and speed from insight to action—so you can prove ROI without pulling custom reports.

Feature highlights

**AI anomaly detection**

Automatically detect and respond to unusual spending spikes with a machine learning engine to prevent budget overruns.

**Cost forecasting**

Predict future cloud spend with proprietary algorithms to improve budget accuracy and financial planning.

**Cost allocation**

Achieve granular cost attribution without manual tagging to accurately allocate every dollar, including complex Kubernetes charges.

**Continuous optimization**

Turn cost-saving insights into automated actions in minutes to continuously realize savings without manual intervention.

**FinOps Performance Index™**

Measure your FinOps maturity with a composite score to benchmark performance against peers and identify areas for improvement.

**ML Kubernetes rightsizing**

Leverage a machine learning engine to automatically right-size Kubernetes workloads, reducing costs by up to 70% while guaranteeing performance.

**Deployment controls**

Enforce budgets with pre-deployment approval workflows to prevent cost overruns before resources are ever provisioned.

**Cloud visibility**

Gain a unified view of your entire technology stack, from public and private clouds to containers and SaaS, to manage all your costs in one place.

CloudBolt plays a crucial role in streamlining our automation processes and ensuring efficient management of resources in diverse cloud environments."

- Gartner Peer Insights review

CLOUDBOLT
The cloud ROI company®

Why platform engineers choose CloudBolt

90% faster time-to-savings

Go from insight to action in hours, not months.

99% allocation accuracy

Solve cost attribution in weeks, without tag cleanup.

40-60% Kubernetes savings

Optimize containers automatically with performance guarantees.

Complete cloud coverage

Manage public cloud, VMware, Kubernetes, and SaaS in one place.

Ready to see FinOps that runs itself?

Discover how AI-driven insights, continuous optimization, and purpose-built KPIs help you cut costs by up to 60%—without sacrificing performance or control.
