

CLOUDBOLT OVERVIEW

Build, manage, and optimize any cloud

Faster, smarter, continuously.

The convergence of visibility, governance, and optimization

Maximize every dollar. Accelerate every deployment. Eliminate every inefficiency. Whether you're operating in public cloud, private data centers, Kubernetes, SaaS—or all of the above—CloudBolt gives you the power to build fast, manage efficiently, and optimize continuously. This isn't just visibility. It's velocity.

Build fast

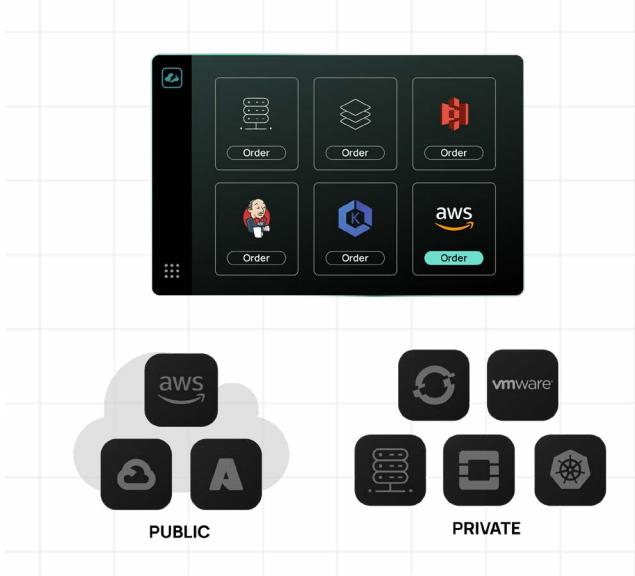

- Simplify with a unified hybrid cloud platform.
- Enable true self-service.
- Incorporate reusable, cloud-agnostic blueprints.
- Enforce guardrails and governance.
- Out-of-the-box integrations with 200+ applications and services
- Python-powered flexibility for easy custom extensions.

Manage efficiently

- Visualize impact across all environments.
- Track spend and manage budgets granularly.
- Systemize tedious actions.
- Automatically rightsizes under and over-provisioned Kubernetes containers.
- Prevent CPU throttling and out-of-memory errors.

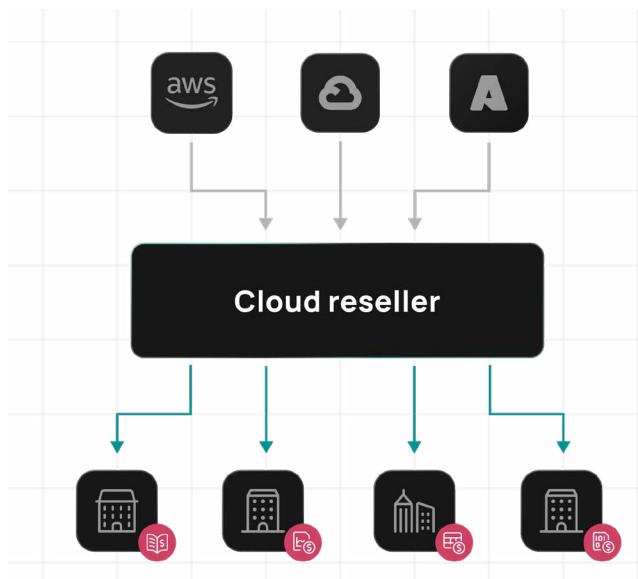

Optimize continuously

- Automate actions that cut costs, boost reliability, and reduce manual effort.
- Accelerate FinOps with AI/ML-powered recommendations and actions.
- Optimize at scale with automated guardrails.
- Reduce insight-to-action time by finding issues faster and by automating actions to remediate.
- Rightsize intelligently to shrink your compute footprint without sacrificing performance.

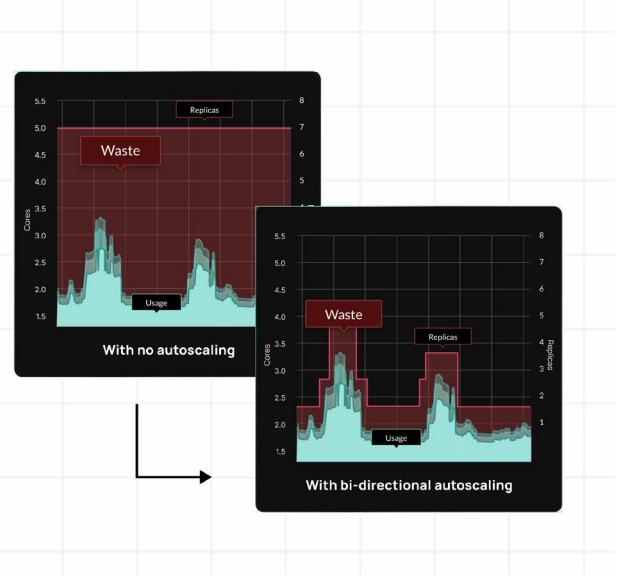

Cloud management

Automate resource delivery, enforce governance, and unify control across your hybrid cloud—all from a single self-service platform. Eliminate IT bottlenecks and manual provisioning delays with policy-driven automation that puts infrastructure in your teams' hands in minutes.

Cloud reselling

Streamline billing operations and unlock new revenue streams with a platform built for cloud resellers, MSPs, and distributors. Automate multi-cloud chargebacks, eliminate reconciliation errors, and offer white-labeled portals with real-time visibility and margin control.

Kubernetes optimization

Stop firefighting OOMKills and overpaying for idle resources. Machine learning-based optimization continuously rightsizes container resources, harmonizes with HPA, and understands workload nuances—so you can cut costs without sacrificing reliability.

Cloud FinOps

CloudBolt brings FinOps to life with AI-driven anomaly detection, precise allocation through FOCUS, and automated optimization actions. Eliminate budget surprises, reduce waste by up to 60%, and finally connect cost to value—at scale.

“

CloudBolt was accessible yet powerful—it let everyone on our team contribute at their own skill level. We started by just trying to install our software in the cloud, but what we got in return unlocked way more than we ever expected.”

- Ludwig Mueller
