

KEY USE CASE

ACCELERATE NATIVE CLOUD

You'd think cloud providers would offer tools that were easy to use. CloudBolt makes it easy.

"CLOUDBOLT IS AGNOSTIC, GIVING US THE ABILITY TO **DIVERSIFY AND LEVERAGE MULTIPLE PLATFORMS** ALL THE WHILE PROVIDING A FRICTIONLESS CUSTOMER EXPERIENCE THAT'S SIMPLE AND EASY!"

- State IT Agency

THE CHALLENGE

NATIVE CLOUD TOOLS ARE NOT ENOUGH FOR YOUR CLOUD

Native cloud tools provided by AWS, Azure, GCP, etc. are designed specifically to address the clouds they are native to. Unfortunately, in a multi-cloud world, that means different tools for different cloud providers with no easy way to automate, optimize, or secure workloads between them. It's like having to manage MULTIPLE cloud operating systems. And all of them require lots of expertise to use.

WATCH A SHORT VIDEO 

THE SOLUTION

NOT ANOTHER TOOL. AN AGGREGATOR.

"Oh no...not another tool!" We agree with you. CloudBolt is more than a tool. It's the overarching aggregator of all things cloud and automation. CloudBolt simplifies automation, orchestration, visibility, and security/compliance/governance at scale.

- ✓ Common UX across all clouds
- ✓ Automated reporting
(aggregate from multi-clouds)
- ✓ One workload for the cloud
- ✓ Market-driven capabilities
- ✓ Better business continuity

“

At first, I think Developers were scared of what we were implementing. There was fear that we were locking them out or that they were going to lose control. But over time they've realized that we're taking away the mundane administrative tasks. **They can focus their talents on developing.**”

- SVP Infrastructure & CISO, National Financial Company

ABOUT US

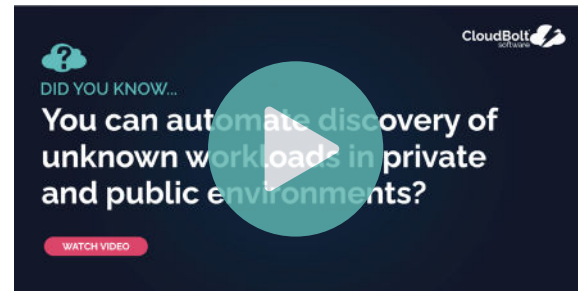

IT TAKES A **FRAMEWORK**

CloudBolt offers a comprehensive, award-winning cloud automation, visibility, and governance framework specifically built to stitch together your disparate multi-cloud, multi-tool, multi-team world and bring order to your infrastructure chaos. CloudBolt has systematically built capabilities that benefit everyone across an enterprise – ITOps, DevOps, SecOps, and FinOps – by enabling:

- Clarity into multi-cloud spend with robust reporting that enables real optimization
- Self-service IT that truly is automated (no expertise required)
- Guardrails for better governance that ensure compliance and increase your security posture
- Reusability of proven best practice elements, blueprints, and code, stop reinventing the wheel across teams

Our framework allows you to unify and simplify – today and tomorrow. Future-proof your cloud strategy with CloudBolt.
