

CloudBolt Professional Services: Training Offerings

To maximize the value of your CloudBolt investment, CloudBolt Professional Services partners with your team to support your business goals, define success criteria, mitigate risks, and help you achieve your desired business outcomes. With CloudBolt Professional Services, we help you better gain control of your operations and application delivery, while optimizing your IT investments across your hybrid and multi-cloud environments.

As part of your onboarding with CloudBolt, our Professional Services team provides a rich suite of training offerings through CloudBolt Essentials and CloudBolt Boot Camp. Combined, these offerings help you and your organization to accelerate your knowledge of CloudBolt and drive greater innovation in your enterprise.

CloudBolt Essentials (2-3 days)

Day 1

CloudBolt overview

Platform architecture

Understanding object relationships

- Resource handlers (RHs)
- Users, roles, groups, environments
- OS builds, images, parameters

Active Directory / LDAP integration and authentication

Mapping and connecting to cloud environments

Installation and hands-on training through CloudBolt lab environments

Navigating the CloudBolt user interface

CloudBolt service catalog overview

- Introduction to CloudBolt blueprints
- Order form customizations
 - Parameters, hostname templates, OS builds, pre-configuration setup workflows and approval processes
 - Basic server provisioning

Day 2

Service lifecycle management

- Rate management, power schedules
- Expiration dates, decommissioning
- Tags, email notifications
- Reporting

Virtual machine and server management

- Remote server access, resources
- Server actions / remote scripts
- CLI, PowerShell

CloudBolt orchestration framework

Anatomy and blueprint build for a multi-tiered application

CloudBolt administration

- System status, Processes
- CloudBolt directories, log files
- Upgrading CloudBolt

Troubleshooting

- Maintenance mode
- Export and download database

CloudBolt Boot Camp (4-5 days)

This accelerated course is designed to give CloudBolt administrators and end-users in-depth knowledge on how to orchestrate and integrate comprehensive solutions. CloudBolt Boot Camp is a 4-5 day training class that starts with CloudBolt Essentials. It then focuses on more advanced topics to help you get even more out of your CloudBolt investment. These topics include: multi-tier blueprint design, UI extensions, service catalog development (through third-party integrations and custom development), and an overview of CloudBolt's Python/Django framework.

In the era of cloud, **CloudBolt** helps IT and developers work better together by empowering them with better visibility, control, and self-service. CloudBolt delivers the world's most user-friendly cloud management platform, so enterprises can provision, orchestrate, and consume IT resources across hybrid cloud, multi-cloud, and container environments.
