

# MSP CloudBolt Overview

CloudBolt's hybrid cloud management platform enables enterprise IT departments to build, deploy, and manage private and public clouds quickly and efficiently. The user-friendly portal hides the complexities of hybrid cloud, giving end-users the ability to manage and provision resources on demand, while administrators set provisioning conditions for governance. With CloudBolt, IT leverages its investment and controls costs while providing self-service IT, as well as increasing flexibility and agility.

# WHAT IS CLOUDBOLT?

CloudBolt is an enterprise-trusted cloud management platform that empowers users with self-service IT, granular cost visibility, and day two support. Through our console you can simplify provisioning, orchestration, and infrastructure resources automation for your customers. CloudBolt's centralized platform provides you with comprehensive reporting, analytics, and governance capabilities to gain efficiencies. Thus, transforming the way your end users interact with their data centers, multiple hypervisors, and public cloud environments.

## WHY CHOOSE CLOUDBOLT AS A PARTNER?

CloudBolt gives you an edge that helps you distinguish yourself in the crowded hybrid cloud space. You can easily customize the look and feel of CloudBolt to your own branding and logo so that your customers get a hybrid cloud solution from their trusted partner. Plus, CloudBolt's RBAC-based multi-tenancy model is easy to use and is leveraged by many organizations. For example, you can onboard new customers in minutes and get granular visibility of their environment easily for better decision making. CloudBolt is pre-integrated with several authentication solutions like LDAP, Okta, etc. to ensure complete security.

With CloudBolt, you empower your customers to stay agile, competitive, and to focus more on strategic initiatives. From a single-pane-of-glass you provide a comprehensive billing support for different customer personas and across clouds. Using CloudBolt's policy driven platform and powerful approval workflows further simplifies governance of the hybrid cloud environment. Help your customers to move at the speed of ideas with day two support and complete application lifecycle management. With access to CloudBolt's industry experts you can leap ahead of your competition, stay up to date with technology integrations, and design new strategies to increase margins.

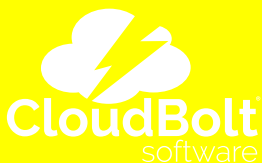

Partner confidently with your customers leveraging the power and simplicity of CloudBolt.

## Resource Handlers

 Alibaba Cloud
 Amazon Web Services
 AWS GovCloud (US)
 Azure
 Azure Classic
 Azure resource handler
 Azure Stack
 CenturyLink Cloud
 Google Cloud Platform
 Hyper-V
 IBM Cloud
 IBM Cloud for Government
 IPMI
 Nutanix Acropolis
 OpenStack
 Oracle Cloud Infrastructure
 Oracle Compute Cloud
 QEMU-KVM
 VMware Cloud on AWS
 VMware vCenter
 Xen

- ✓ Multi-cloud, multi-hypervisor management
- ✓ Automated provisioning and orchestration
- ✓ Extensible architecture environment
- ✓ Auto-discovery of resources
- ✓ White labeling and website listing
- ✓ RBAC-based multi-tenancy
- ✓ Simplified self-service IT
- ✓ Single pane of glass for hybrid, multi-cloud, and multi-hypervisor environments
- ✓ Faster time to market
- ✓ Cost transparency & monitoring
- ✓ Comprehensive governance through policies and authentication
- ✓ Unparalleled return on investment (ROI)
- ✓ Out-of-the-box technology integrations
- ✓ Kubernetes and application lifecycle management
- ✓ Joint marketing opportunities with CloudBolt
- ✓ Access to CloudBolt industry experts
- ✓ Influence roadmap decisions
- ✓ Grow your margins
- ✓ Pre-packaged training programs

In the era of cloud, **CloudBolt** helps IT and developers work better together by empowering them with better visibility, control, and self-service. CloudBolt delivers the world's most user-friendly cloud management platform, so enterprises can provision, orchestrate, and consume IT resources across hybrid cloud, multi-cloud, and container environments.
